## Project Title

Real Estate Property Management & Marketplace System

## Version

1.0

## Overview

The Real Estate Property Management & Marketplace System is a web-based application that allows sellers to list properties and buyers to search, view, and inquire about available properties. The system also provides an administrative panel for managing users, properties, and platform activities.

The platform aims to simplify the property buying and selling process by providing a centralized system where users can interact securely and efficiently.

---

## Problem Statement

Traditional property buying and selling often involves manual processes, scattered information, and limited communication between buyers and sellers.

Challenges include:

- Difficulty finding suitable properties
- Lack of centralized property information
- Time-consuming communication process
- Limited property management capabilities
- Risk of fraudulent or duplicate listings

The proposed system addresses these issues through a digital platform.

---

## Objectives

- Provide a centralized property marketplace.
- Allow sellers to list and manage properties.
- Allow buyers to search and inquire about properties.
- Enable administrators to manage platform operations.

- Improve transparency and accessibility of property information.
- 

## User Roles

### Buyer

#### Responsibilities

- Register and log in
- Search properties
- View property details
- Save favorite properties
- Send inquiries to sellers

#### Permissions

- View approved properties
  - Manage personal profile
  - View inquiry history
- 

### Seller

#### Responsibilities

- Register and log in
- Add property listings
- Update property information
- Delete listings
- View buyer inquiries

#### Permissions

- Manage own properties
  - Upload property images
  - Mark property as sold
- 

### Super Admin

#### Responsibilities

- Manage all users
- Manage all properties

- Approve or reject listings
- Monitor platform activities

### **Permissions**

- Full system access
  - Generate reports
  - Remove inappropriate content
- 

## **Functional Requirements**

### **User Authentication Module**

#### **Features**

- User Registration
- Login
- Logout
- Password Reset

#### **Inputs**

- Name
- Email
- Password
- User Role

#### **Outputs**

- User account creation
  - Secure login access
- 

### **Property Management Module**

#### **Features**

- Add Property
- Edit Property
- Delete Property
- View Property

#### **Property Information**

- Property Title
- Description

- Property Type
  - Price
  - Address
  - City
  - Bedrooms
  - Bathrooms
  - Area
  - Images
- 

## Search and Filter Module

### Features

- Search by city
- Filter by property type
- Filter by price range

### Expected Output

List of matching properties.

---

## Favorites Module

### Features

- Save property
  - Remove property from favorites
  - View favorite properties
- 

## Inquiry Module

### Features

- Send inquiry
- Receive inquiry

### Inquiry Details

- Buyer Name
  - Property
  - Message
  - Date
-

## **Admin Management Module**

### **Features**

- Manage users
- Manage properties

### **Dashboard Metrics**

- Total Users
  - Total Properties
  - Approved Listings
  - Pending Listings
- 

## **Non-Functional Requirements**

### **Security**

- Password encryption
- Role-based access control
- Session management

### **Performance**

- Page load in less time
- Efficient database queries

### **Usability**

- Responsive interface
- Simple navigation
- Mobile-friendly design

### **Reliability**

- Database backup support
  - Error handling
-

# Technology Stack

## Frontend

- HTML
- CSS
- Bootstrap 5
- JavaScript

## Backend

- Python
- Django

## Database

- SQLite

## Development Tools

- VS Code
  - **GitHub**
- 

# Database Entities

## User

- User ID
- Name
- Email
- Password
- Role

## Property

- Property ID
- Seller ID
- Title
- Description
- Price
- City
- Property Type

## **Inquiry**

- Inquiry ID
- Buyer ID
- Property ID
- Message

## **Favorite**

- Favorite ID
  - Buyer ID
  - Property ID
- 

## **User Flow**

Seller Registration

- Add Property
  - Admin Approval
  - Property Published
  - Buyer Search
  - Buyer Views Property
  - Buyer Sends Inquiry
  - Seller Responds
- 

## **Future Enhancements**

- Online payment integration
  - Google Maps integration
  - AI-based property recommendations
  - Real-time chat system
  - Mobile application
  - Property rating and review system
- 

## **Expected Outcome**

The system will provide an efficient digital platform for property buying and selling while allowing administrators to manage listings and users effectively. The solution will reduce manual effort, improve accessibility, and enhance the overall user experience.
